To whom it may concern,

I am a second-year Honours Co-operative Mathematics student at the University of Waterloo seeking for a co-op/internship position in software engineering, data analytics, or web development. I bring strong problem solving skills, independent but also has the ability to work cooperative, and the ability to learn and adapt quickly in new environments. My academic background, combined with hands-on project work, has equipped me with both the technical and interpersonal skills needed to contribute effectively in a professional setting.

For my recent deliverables, I developed a travel advisor chatbot using Azure AI services and built a personal portfolio website with React, Spline, and FastAPI. Currently, I am working on data analytic projects, data science, and customized projects for companies. These experiences improved my abilities in programming, system design, and integrating user feedback into functional solutions. I have also strengthened my collaboration and communication skills by presenting deliverables to industry partners, participating in agile workflows, and working in diverse project teams.

I am eager to apply my technical expertise and commitment to continuous learning to support innovative projects and contribute to organizational goals. I am passionate for the opportunity to bring my dedication, adaptability, and enthusiasm to a dynamic work environment.

Thank you for your time and consideration. Looking forward to the possibility of contributing to your team.

Sincerely,

Ching Yu Tseng
